
Biological Recording – filling evidence gaps – the UK (and Europe) perspective

David Roy

Centre for Ecology & Hydrology

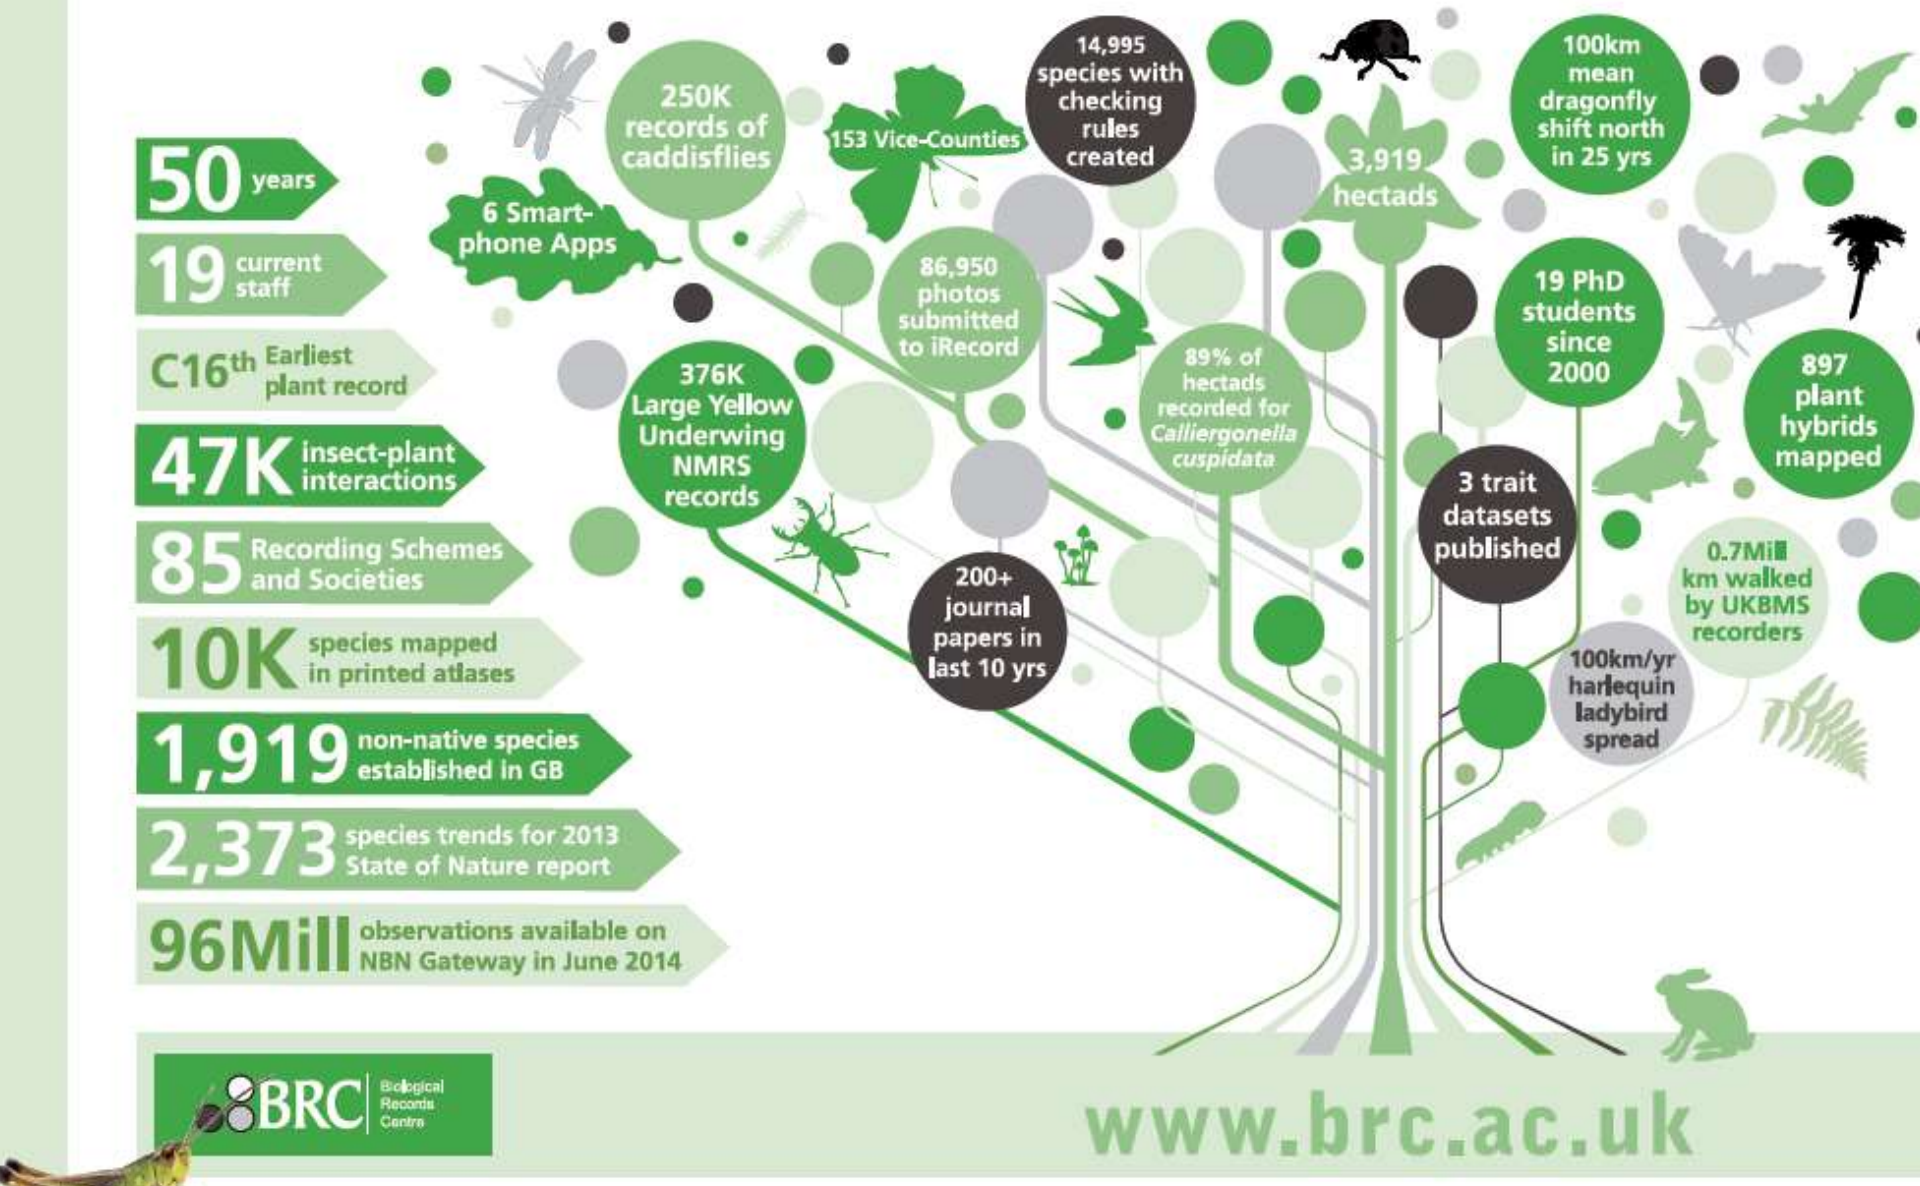
BRC Biological Records Centre

The challenge

- Species & ecosystems increasingly threatened by multiple man-made pressures
- Policy makers need sound evidence to protect the environment, mitigate impacts, regulate use of resources etc
- .....but monitoring is expensive and budgets are reducing
- Can biological recording by volunteers deliver useful data in a cost effective manner?

BIOLOGICAL RECORDS CENTRE



BRC Biological Records Centre

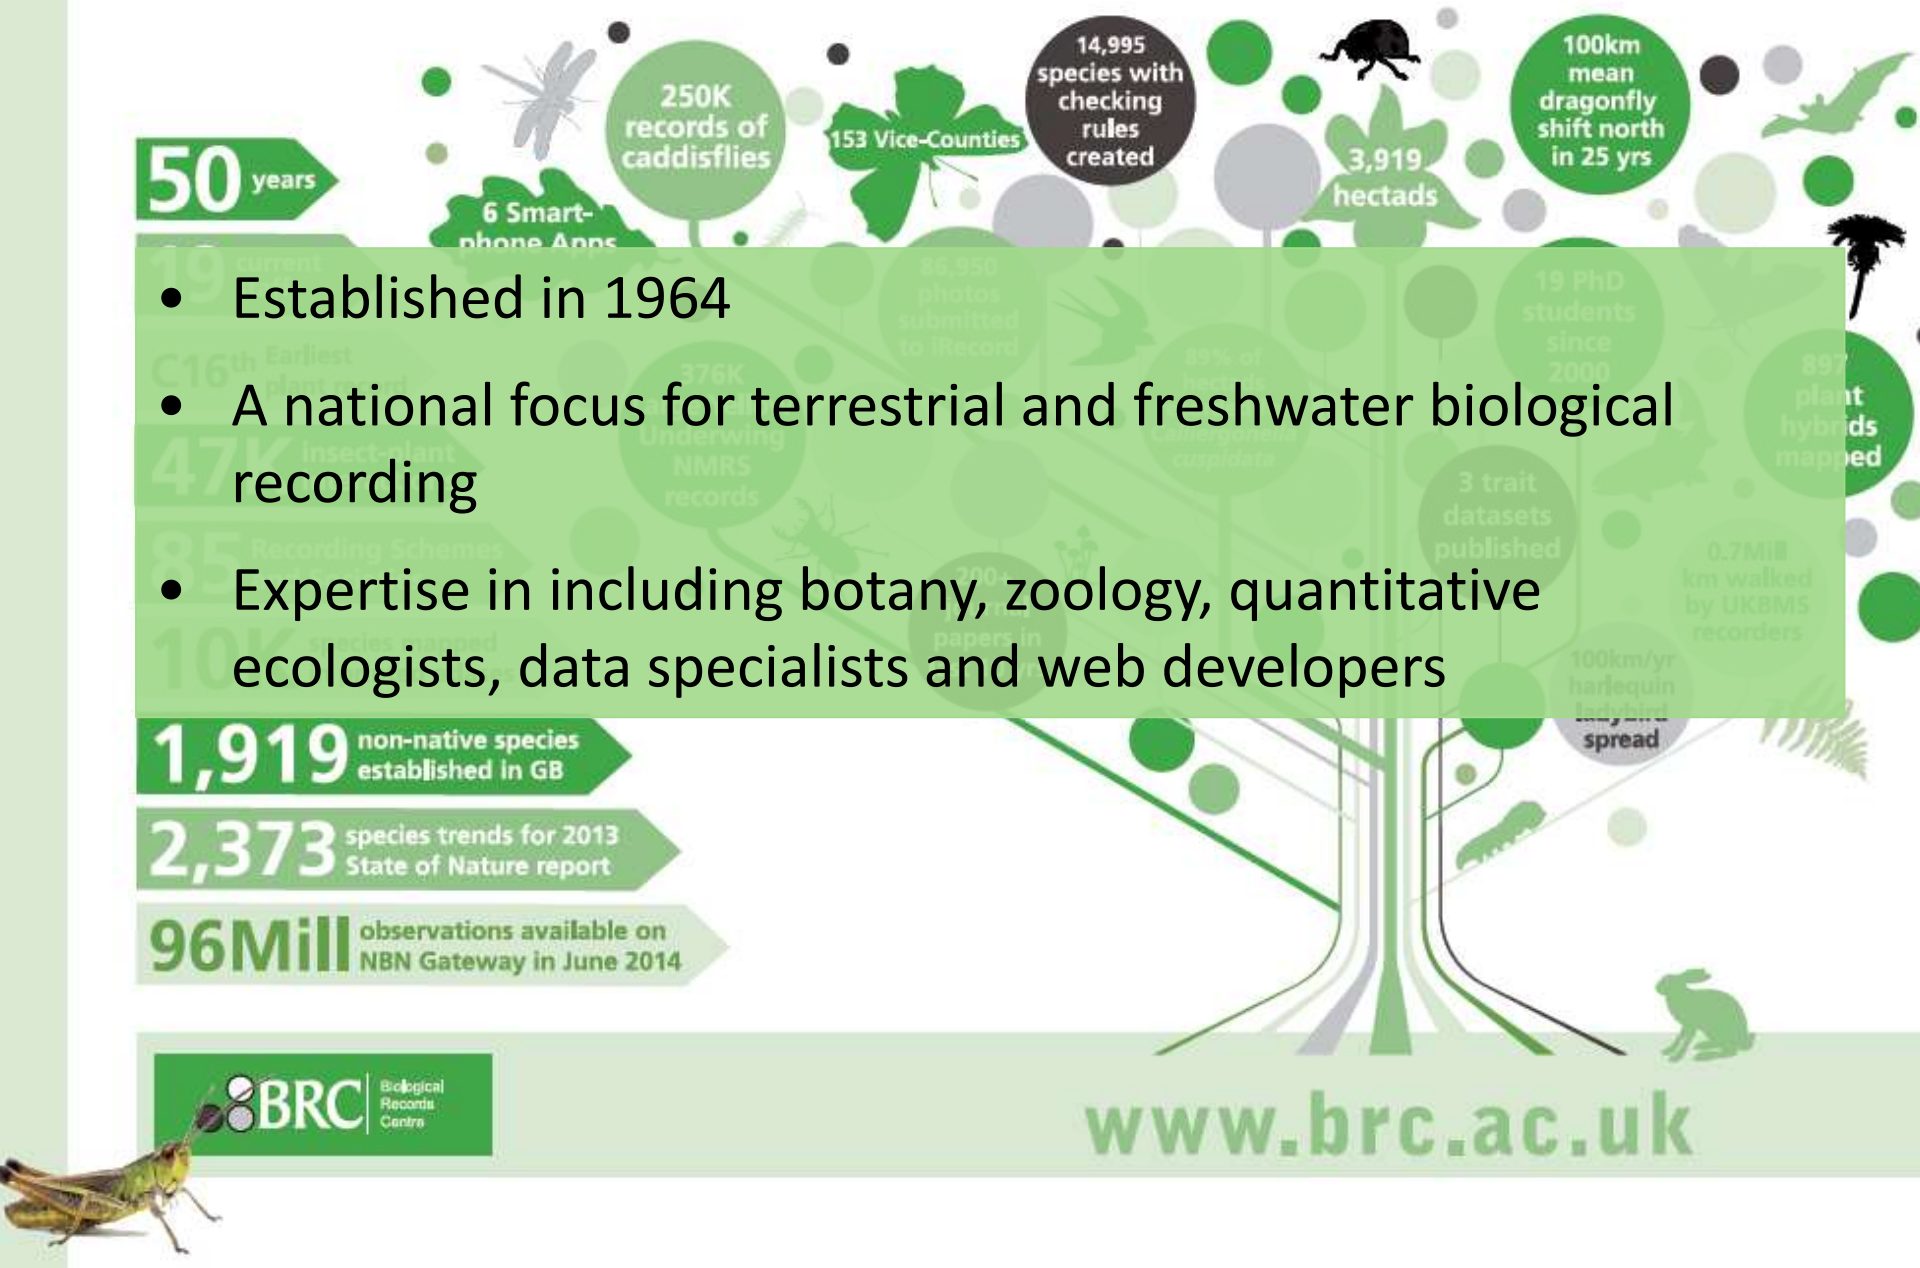
BIOLOGICAL RECORDS CENTRE



- Established in 1964
- A national focus for terrestrial and freshwater biological recording
- Expertise in including botany, zoology, quantitative ecologists, data specialists and web developers

Pros & cons of biological recording data

- Broad taxonomic scope (incl. functionally important, ‘non-charismatic’ taxa)
- Wide geographic coverage across gradients
- Early warning and long-term perspective
- Provides wider engagement (citizen science)

- .....but recording is often biased in time, space, detectability & effort per visit

- However, we have developed statistical techniques to account for these

What might happen to species with climate change?

Die

- ➢ extinction

Move

- ➢ range shift

Respond *in situ*

- ➢ population change
- ➢ phenological change

• Adapt

- ➢ ecological change
- ➢ evolutionary change

NERC SCIENCE OF THE ENVIRONMENT

Attributable to neonicotinoid usage?

Oilseed rape has benefited wild bees

But, oilseed rape foragers were ~3x more negatively affected by exposure to neonicotinoids than non-crop foragers.

Sub-lethal effects of neonicotinoids could scale up to cause losses of bee biodiversity

One future for monitoring – BRC priorities

- Wider ‘citizen’ participation: expert and non-expert volunteers
  - Different biases to deal with, requiring data of *known* quality

One future for monitoring – BRC priorities

- Wider ‘citizen’ participation: expert and non-expert volunteers
  - Different biases to deal with, of data of *known* quality
- Structured/designed volunteer monitoring
  - Asks more of contributors
  - More power to detect change

Centre for Ecology & Hydrology
NATURAL ENVIRONMENT RESEARCH COUNCIL

Systematic monitoring – BRC priorities

United Kingdom
Butterfly Monitoring Scheme

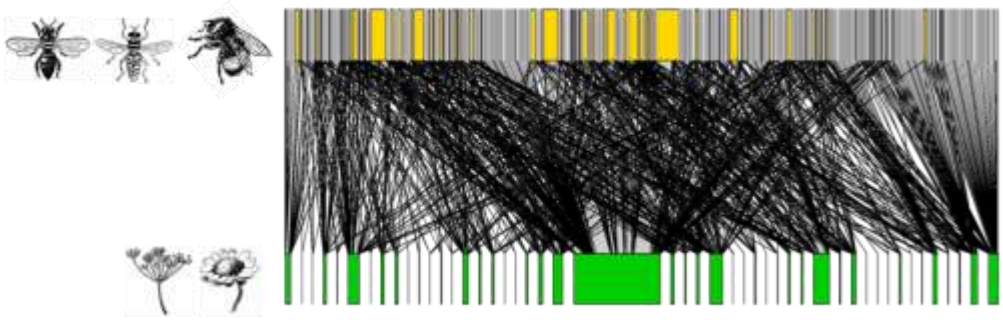
(From 1976)
(with Butterfly Conservation/JNCC)

National Plant Monitoring Scheme (for 2015)
(developed by BRC/BSBI/Plantlife/JNCC)

+ **Pollinator Monitoring Scheme** (started in 2017)

One future for monitoring – BRC priorities

- Wider ‘citizen’ participation: expert and non-expert volunteers
  - Different biases to deal with data of *known* quality
- Structured/designed volunteer monitoring
  - Asks more of contributors
  - More power to detect change
- Use of technology
  - Modelling; Field capture (+sensors); Integration with other data types (i.e. EO); eDNA; image recognition
- Different (more important?) measures of change
  - Ecosystem function & resilience ← interactions



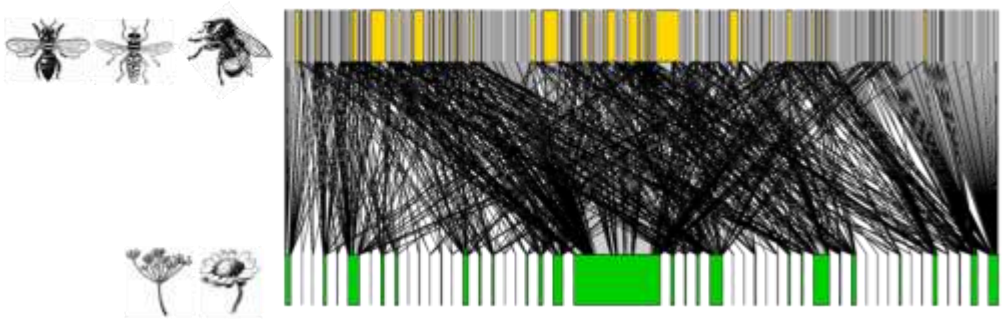
Centre for Ecology & Hydrology
NATURAL ENVIRONMENT RESEARCH COUNCIL

One future for monitoring – BRC priorities

- Wider ‘citizen’ participation: expert and non-expert volunteers
  - Different biases to deal with data of *known* quality
- Structured/designed volunteer monitoring
  - Asks more of contributors

But will it resonate with people?

- Use of technology
  - Modelling; Field capture (+sensors); Integration of data; EO; eDNA
- Different (more important?) measures of change
  - Ecosystem function & resilience ← interactions



Centre for Ecology & Hydrology
NATURAL ENVIRONMENT RESEARCH COUNCIL

In conclusion

- We are fortunate to have an amazing legacy of biological recording in Great Britain
- Recent growth in Citizen Science has increased interest in wildlife recording worldwide
- Technology makes biological recording more accessible and available
- Novel statistical techniques enhance our capacity for measuring and interpreting change
- Great potential in extensive biodiversity recording for understanding environmental change
